

Project Design Phase
Solution Architecture

Date	30-6-2026
Team ID	23MH1A4257
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture for the Credit Card Approval Prediction system consists of multiple layers that work together to automate the credit card approval process. At the presentation layer, a web-based user interface developed using HTML, CSS, JavaScript, and Flask allows customers or bank officials to enter applicant details such as age, income, employment status, credit history, and other relevant information. Once the application is submitted, the data is sent to the application layer, where input validation and business logic are implemented using Python and Flask. This layer verifies the completeness and correctness of the entered information before processing it further.
